

Backing up Footage on the Phoenix

Firstly, **insert your storage device** you wish to export the footage to; into any of the Phoenix's USB ports this can be a USB stick for example.

Then once you have done the above right click to access the **main menu** of the Phoenix and select the **backup** option, this is the icon circled in the image below:

This will open the below screen. You will now need to choose a **From and To date and time** (this will be all the recordings which happen in this time frame). You can **change the duration** of the footage you want to export with the duration section.

After this you can choose which channels you would like to **export the footage from**, then click **calculate**, this will show you how much space you are going to need to export the footage you have selected. Finally, if you are using a **USB stick directly** into the Phoenix then it will automatically select to use this storage device then you can just click **Backup** and this will export all the footage selected to the memory stick.
