This guide will show you how to access your Scorpion DVR remotely on a Mac through a browser.

1. First step, you need to make sure that you have plugged your DVR into the router and that it is on the same network as your Mac. The first time you will try to access your DVR through a browser, you should see something like the following picture:

2. You can go ahead and download Java. Once you press 'Download Java' it should automatically redirect you to the official website.

3. You can now start to download the program. Once you have finished downloading the program, the setup box should pop up.

4. You can now install the program. Follow the simple steps that will help guide you through the installation.

000	🥪 Install Java 7 Update 67	۵
<ul> <li>Introduction</li> <li>Destination Select</li> <li>Installation Type</li> <li>Installation</li> <li>Summary</li> </ul>	The installation was completed successfully.	
ORACLE	Go Back Clo	se

5. Once you have finish installing the program, try to reconnect to the DVR browser. You will need to run the program you have just installed.

Do you wai	t to run this application?	×
<b>S</b>	Publisher: zilliontek Locations: http://dvr-update.com http://192.168.0.30:85	
This applicatior and personal in locations and p	will run with unrestricted access which may put your ormation at risk. Run this application only if you trus blisher above.	computer t the
This application Java security up manifest does r attribute. Please information. Mo	will be blocked in a future late because the JAR file ot contain the Permissions contact the Publisher for more re Information	Cancel

6. If you still can't view your DVR on the browser and if an error popped up you will need to

add it to Java security tab.

7. Take a note of the error message that will pop-up as you will need to remember the web address which it is showing.

Missing required Permissions manifest attribute in main jar		,,		
Missing required Permissions manifest attribute in main jar	ecurityException	1		
Missing required Permissions manifest attribute in main jar:				s
http://dur.umdata.com/com/ct/hd/M/ch/forus/AacCALion	Missing required Permi	ssions manifest attribut	n in main jar:	1

8. First you will need to press on the apple icon on the top left hand cornet. Once you do this you want to select 'System Preferences'.

9. Next you will need to select 'java'.

System			
11	**	P	(@
Users & Groups	Parental Controls	Date & Time	Softw Upda
Other
